

(A) NIST certified values: the win survives

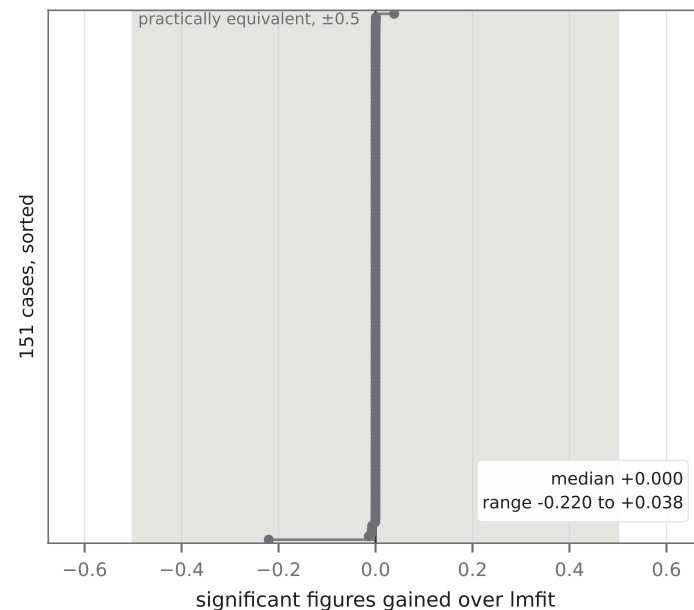

(B) by dataset, 22 of them

(C) Imfit head-to-head: the win evaporates

(D) by case, 151 of them

Both rows are in one unit, the log-relative error, so one margin means the same thing in each. The x-scales differ by 6x between (A) and (C), and by 4x between (B) and (D).
